

wind generation engineer

- **Leading Wind Farm Developer**
- **Excellent Opportunity for an Experienced Project Manager**

Our client is a household name in Wind Farm Development with actual and planned wind farms around Australia.

You provide leadership and oversight of projects during the engineering, procurement, and construction phases using internal and external resources. You will also lead the integration of new wind energy projects into utility transmission systems. Also, you will provide recommendations on costs, schedules and other factors for construction and operations of proposed or existing wind energy facilities and manage engineering, procurement, and construction activities during the pre-construction and construction periods on wind energy projects to ensure cost and schedule goals are met.

You are a qualified engineer with large scale wind farm development background. This is a senior role and a significant salary package and bonus structure is on offer.

If you would like to take advantage of this rare opportunity then please call **Michael Green** to discuss or submit your resume.
